

Amit Kumar

Smart Contract Engineer | Solidity & Web3 Developer

nextech.amit@gmail.com | +91 91494 59691 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | India | Remote

SUMMARY

Solidity engineer specializing in production DeFi protocol architecture: RWA tokenization with on-chain compliance, perpetuals DEX with ERC-4337 account abstraction, insurance vaults, DAO governance, and keeper automation. Deployed 70+ verified contracts across Base Mainnet and EVM testnets with zero high-severity Slither findings. Deep focus on EVM security, invariant-proven correctness, and gas optimization via Yul assembly. Open to full-time or contract remote roles; any timezone.

TECHNICAL SKILLS

Languages: Solidity 0.8, TypeScript, JavaScript, Yul, EVM Inline Assembly

Standards: ERC-20, ERC-721, ERC-1155, ERC-2612 (Permit), ERC-3643 (RWA), ERC-4337 (AA), ERC-4626, ERC-5484, EIP-712, UUPS

Protocols & Oracles: Chainlink (VRF, CCIP, Price Feeds, Automation/Keepers), Aave V3, OpenZeppelin, IPFS, Pinata, Arweave

Tools & Infra: Foundry, Anvil, Tenderly, Remix IDE, Git, Vercel, CREATE2, Basescan, Etherscan Verification

Security & Audit: Invariant Fuzzing, Slither, Echidna, CEI Pattern, ReentrancyGuard, SafeERC20, Flash-Loan & Staleness Guards, Circuit Breakers

Frontend & Web3: Next.js 14/15, Wagmi v2, Viem, RainbowKit, TanStack Query v5, Framer Motion, Tailwind CSS

EXPERIENCE

Smart Contract & Web3 Engineer

2024 – Present

Protocol Architecture Remote India

Architected and deployed **70+ verified smart contracts** across multi-contract DeFi protocols: RWA tokenization (ERC-3643, on-chain compliance), perpetuals DEX (ERC-4337, Chainlink CCIP, 50x leverage), decentralized insurance (ERC-4626, Aave V3 yield routing), DAO governance (TimelockController, rage-quit, flash-loan-resistant voting), and keeper automation across Base Mainnet and EVM testnets with **zero high-severity Slither findings**.

Owned the complete engineering lifecycle across every protocol: threat-modeled architecture, authored and audited Solidity, proved protocol correctness via Foundry stateful invariant fuzzing, and shipped production-grade Next.js/Wagmi frontends.

Implemented advanced EVM primitives including UUPS collision-safe upgradeable proxies, ERC-4337 smart accounts with custom session-key paymasters, Merkle yield distributors, and on-chain SVG art engines; achieved 20-35% gas reduction via Yul assembly, packed storage layout, and O(1) data structures.

PROJECTS

Nexus RWA Protocol: Institutional-Grade RWA Tokenization [\[github\]](#)

Aug 2026

Solidity ERC-3643 Chainlink Automation & Oracles Merkle Yield Base Mainnet Foundry

On-chain compliance engine intercepts every ERC-20 transfer in real-time, validating KYC tier, OFAC sanctions, and jurisdictional rules with zero off-chain API dependency; Chainlink-automated Merkle yield drops serve thousands of investors at O(1) gas; NAV oracle with 15% circuit breaker auto-pauses on flash-crash; legal clawback natively role-gated with immutable on-chain proofs. **6 contracts on Base Mainnet. 219+ tests, stateful invariant fuzzing. Slither: 0 Critical, 0 High.**

On-Chain Automation Protocol (Keeper Network) [\[live\]](#) [\[github\]](#)

Jul 2026

Solidity ETH Bonding & Slashing Base Mainnet Foundry

Permissionless keeper network: ETH-bonded operators execute jobs and earn rewards; 3 slashes trigger autonomous jail state. ExecutionEngine isolates reverting target calls via try/catch boundaries so gas-griefing failures never block the batch queue. O(1) swap-and-pop active queue and pull-payment treasury. **3 contracts on Base Mainnet. Slither: 0 Critical, 0 High.**

Sentinel Insurance Protocol [\[live\]](#) [\[github\]](#)

May 2026

Solidity 0.8.24 ERC-4626 Aave V3 DAO Governance ERC-5484 Base Mainnet

ERC-4626 vault routes idle USDC into Aave V3 pools for automated LP yield; flash-loan-resistant DAO enforces block.number-1 snapshot voting; dynamic soulbound PolicyNFTs render real-time coverage states with fully on-chain SVG art. **8 contracts on Base Mainnet. Slither: 0 Critical, 0 High.**

Nexus Perpetuals DEX: 50x Gasless Leverage [\[live\]](#) [\[github\]](#)

Jan 2026

Solidity ERC-4337 Chainlink CCIP & Oracles Sepolia Foundry

Full on-chain perps engine: ERC-4337 paymaster sponsors 100% of gas; Chainlink staleness-guarded oracles prevent manipulation; CCIP cross-chain margin with per-trader nonce deduplication; minimum-liquidity genesis burn guards against LP share inflation. **15 contracts on Sepolia. Invariant fuzzing: zero solvency violations. Slither: 0 Critical, 0 High.**

Sentinel DAO: Anti-Flash Governance [\[live\]](#) [\[github\]](#)

Nov 2025

Solidity TimelockController Aave V3 Treasury ERC-4337 Rage-Quit Sepolia

48H TimelockController + VetoCouncil blocks flash-governance attacks; rage-quit module allows dissenting minorities to redeem proportional treasury assets before hostile execution; Aave V3 treasury yield integration; ERC-4337 gasless voting; ProposalGuard prevents spam. **256 tests, zero failures. Slither: 0 Critical, 0 High.**

Nexus Polkadot DEX [\[live\]](#) [\[github\]](#)

Mar 2026

Polkadot Hub Testnet Chainlink CCIP Foundry Next.js 15

Non-custodial 50x leverage exchange ported to Polkadot Hub Testnet; CCIP cross-chain margin with nonce replay protection; live Binance WebSocket PnL rendering; invariant-proven vault solvency. **Polkadot Solidity Hackathon 2026 submission. Slither: 0 Critical, 0 High.**

Core Protocol Suite [\[github\]](#)

2024–2025

Solidity Foundry EVM Tooling

DSC Stablecoin: Overcollateralized Chainlink-backed stablecoin with fuzz-proven solvency invariants.

UUPS V1-to-V3 Migration: Storage-collision-safe proxy upgrade with atomic state migration logic.

Merkle + EIP-712 Airdrop: MEV-resistant; EIP-712 domain signature binding prevents front-run claim theft.

Chainlink VRF Lottery: Provably fair autonomous raffle; CEI-compliant with zero reentrancy surface.

ERC-721 Dynamic SVG NFTs: Generative on-chain SVG art engine with zero IPFS dependency.

ERC-20 with RBAC & Circuit Breaker: Pausable, deflationary burn mechanism, role-gated minting.

EDUCATION & CERTIFICATIONS

Cyfrin Updraft – Advanced Solidity & Smart Contract Security (Patrick Collins)

2024

Alchemy University – Ethereum Developer Bootcamp (EVM fundamentals, Web3 frontend integration)

2024

B.Sc. Science – Cluster University of Jammu
