

Amit Kumar

Smart Contract Engineer | Solidity & Web3 Developer

nextech.amit@gmail.com | +91 91494 59691 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | India | Remote

SUMMARY

Solidity and Web3 engineer who has built and shipped production-grade blockchain protocols end-to-end: insurance vaults, perpetuals DEX, DAO governance, keeper networks, and ERC-4337 smart wallets across Base Mainnet and EVM testnets. Core expertise: EVM security, Foundry invariant suites, Chainlink CCIP, UUPS proxies, and flash-loan-resistant governance. Zero high-severity Slither findings across 60+ verified contracts. Certified via Cyfrin Updraft and Alchemy University. Open to full-time remote roles and protocol collaborations; any timezone.

TECHNICAL SKILLS

Languages: Solidity 0.8, TypeScript, JavaScript, Yul, EVM inline assembly
Standards: ERC-20, ERC-721, ERC-1155, ERC-4337, ERC-4626, ERC-5484, EIP-712, EIP-1967 UUPS
Protocols: Chainlink VRF, CCIP, Price Feeds, Aave V3, OpenZeppelin, Hardhat, Remix IDE
Testing: Foundry (unit, fuzz, integration, invariant, fork), Echidna, Slither
Security: CEI pattern, ReentrancyGuard, SafeERC20, Ownable2Step, flash-loan resistance, oracle staleness guards
Infra: Git, Vercel, IPFS, Pinata, Node.js, CREATE2, Basescan, Etherscan verification
Frontend: Next.js 14/15, Wagmi v2, Viem, RainbowKit, TanStack Query v5, Framer Motion

EXPERIENCE

Smart Contract & Web3 Engineer Jul 2025 – Present
Protocol Developer Remote India
– Took ownership of the full protocol lifecycle: from threat-modelling architecture and writing Solidity to running Foundry invariant suites, validating with Slither, and shipping production frontends in Next.js/Wagmi; **zero high-severity findings across 60+ contracts** deployed on Base Mainnet and EVM testnets.
– Engineered collision-safe UUPS proxy systems and ERC-4337 smart wallets with custom paymasters and session keys; proved protocol solvency via Foundry stateful invariant fuzzing and reduced execution gas 20–35% through Yul assembly, packed storage slots, and O(1) swap-and-pop structures.

PROJECTS

On-Chain Automation Protocol (Keeper Network) [\[live\]](#) [\[github\]](#) Jul 2026
Solidity ETH Bonding & Slashing Base Mainnet Foundry
– Permissionless keeper network: ETH-bonded operators execute jobs and earn rewards; 3 slashes trigger autonomous jail. ExecutionEngine isolates reverting jobs via try/catch so failures never block the batch queue. Gas griefing ceiling, O(1) swap-pop queue, pull-payment treasury. **3 contracts on Base Mainnet. Slither: 0 Critical, 0 High.**

Sentinel Insurance Protocol [\[live\]](#) [\[github\]](#) May 2026
Solidity 0.8.24 ERC-4626 Aave V3 DAO Governance ERC-5484 Base Mainnet
– ERC-4626 vault routes idle USDC into Aave V3 yield; flash-loan-resistant DAO enforces block.number-1 snapshot voting; soulbound PolicyNFTs with on-chain SVG. **8 contracts on Base Mainnet. Slither: 0 High.**

RST Protocol: On-Chain Reputation (ERC-5484) [\[live\]](#) [\[github\]](#) Apr 2026
Solidity ERC-5484 Soulbound UUPS Upgradeable Sepolia
– ERC-5484 soulbound tokens with 5-tier on-chain SVG medals auto-upgrading on score change; UUPS proxy keeps scoring logic upgradeable while SBT records stay immutable. Score bounded 0–1000, overflow impossible by design; 4-layer test suite.

Nexus Perpetuals DEX: 50x Gasless Leverage [\[live\]](#) [\[github\]](#) Jan 2026
Solidity ERC-4337 Chainlink CCIP & Oracles 5 Isolated Layers Sepolia
– ERC-4337 paymaster sponsors 100% of gas; Chainlink staleness-guarded oracles; CCIP cross-chain margin with per-trader nonce dedup; minimum-liquidity burn guards LP inflation. **Zero solvency violations across 6,400 invariant state mutations.**

Sentinel DAO: Anti-Flash Governance [\[live\]](#) [\[github\]](#) Nov 2025
Solidity TimelockController Aave V3 Treasury ERC-4337 Rage-Quit Sepolia
– 48H TimelockController + VetoCouncil rage-quit blocks flash-governance attacks; Aave V3 treasury yield; ERC-4337 gasless voting; ProposalGuard prevents spam. **256 tests, zero failures; treasury solvency fuzz-proved.**

Nexus-Polkadot-Protocol DEX (Polkadot Hackathon Submission) [\[live\]](#) [\[github\]](#) Mar 2026
Polkadot Hub Testnet Chainlink CCIP Foundry
– Non-custodial 50x leverage exchange with CCIP cross-chain margin, live Binance WebSocket PnL, and invariant-proven vault solvency.

Core Protocol Suite [\[github\]](#) 2024–2025
Solidity Foundry EVM
– **DSC Stablecoin:** overcollateralised Chainlink-oracle-backed stablecoin; invariant fuzzing proved solvency.
– **UUPS V1-to-V3 Migration:** storage-collision-safe proxy upgrade with atomic state migration.
– **Merkle + EIP-712 Airdrop:** MEV-resistant; EIP-712 signature binding prevents front-run claim theft.
– **Chainlink VRF Lottery:** provably fair raffle; CEI-compliant, zero reentrancy surface.
– **ERC-721 Dynamic SVG NFTs:** fully on-chain generative art, zero IPFS dependency.
– **ERC-20 with RBAC and circuit breaker:** Pausable, deflationary burn, role-gated mint.

EDUCATION & CERTIFICATIONS

Cyfrin Updraft – Advanced Solidity & Smart Contract Security (Patrick Collins) 2024
Alchemy University – Ethereum Developer Bootcamp (EVM fundamentals, Web3 frontend integration) 2024
B.Sc. Science – Cluster University of Jammu
